

LeapFILE creates innovative cloud solutions that help end users transparently accomplish their work, while providing corporate IT with total control and management. By supporting the changing needs of a mobile and distributed workforce against the rigorous governance demands made on corporate IT, LeapFILE will transform how the corporate world does business.

LeapFILE Folders (beta)

The End of File Sharing

File sharing is a daily hassle for corporate users, especially for distributed, mobile, or client-facing teams.

LeapFILE Folders changes everything. You, your clients, and your teammates can have instant access to the same files right on your desktops. No more time wasted uploading and downloading files, recovering lost email attachments, waiting for updates, or working on obsolete files. Simply browse the contents of your desktop folder and double-click to open and edit shared files. All updates are automatically propagated and available to everyone in real time.

How it works:

- 1 Create a LeapFILE folder on your desktop file system
- 2 Invite team members and clients to that folder
- 3 Add, create, open, and update files

Every member of that folder has the same folder on their desktop. Authorized users can manage and update files. Everyone has effortless access to the same files in real time.

Total Visibility and Control

LeapFILE Folders also eliminates constraints for enterprise IT departments. For IT governance, the system enables total file visibility, control, protection, and policy management. LeapFILE Folders gives IT a solid foundation for security and regulatory compliance.

Highlights:

- Complete end-to-end data encryption with remote wipe
- Granular user and folder security permissions
- File level audit tracking
- Quota management
- Centralized user management
- Hybrid cloud storage option
- Data retention policy enforcement
- LDAP/AD integration
- Reporting

The Story: IT 2.0 – Beyond the Corporate Firewall

The corporate workforce is increasingly distributed, mobile, and highly collaborative. This directly conflicts with the intra-firewall perspective of traditional IT. Standard applications over VPN are simply insufficient. End users need and want collaborative applications that are always on and always available, regardless of location.

The combination of a mobile workforce, ubiquitous bandwidth, and cloud computing is driving the next big shift: extending IT beyond the corporate firewall.

Embracing Mobility

Laptops have become the norm, allowing us to work anywhere with anyone at any time. Real-time access to shared files is essential to a team that telecommutes. LeapFILE Folders enables instantaneous file sharing among all users, whether in or out of the office.

Instant Gratification

LeapFILE Folders is a self-provisioning technology with no learning curve. Because it integrates seamlessly with the desktop, users can easily sign up, set up, and begin sharing files without waiting for IT.

Extending Control Beyond the Firewall

Data is already leaving the corporate firewall via mobile users. On top of that, extra-firewall Web 2.0 technologies are continually being adopted to circumvent IT shortfalls. LeapFILE Folders can help to cover the gap with user friendly solutions that also extend IT's reach.

Enhancing Control Over Corporate Data

Controlling and preserving corporate data remains one of IT's primary missions. LeapFILE Folders provides automatic data protection and enhances global control over corporate data. Administrators can locate and access every file, audit file activity in real time, and centrally manage security policies. Achieving maximum control is possible thanks to the simplicity of using LeapFILE Folders, which ensures a high level of user adoption.

Knowing that valuable company data is encrypted at all times gives me peace of mind. The ability to remotely wipe data from a laptop that's been lost or stolen is priceless.

John O'Malley, IT director of Strang, a Wisconsin architecture/engineering/interior design firm and LeapFILE customer

About LeapFILE

Since 2004, more than 2,000 clients worldwide have adopted LeapFILE Transfers, our secure file transfer solution for the corporate environment. We have earned their trust by solving business workflow problems with the consistent philosophy of making things easy for both end users and IT. We are extending this approach beyond ad-hoc secure file transfer to also support file sharing with LeapFILE Folders.

LeapFILE is a profitable, growing, private company. In a short span, we've established a loyal following and client base that includes the likes of Yum! Brands, Verisign, Oracle, and Newsweek.

Peter Chang, Founder

While Peter may have created the spectacular vision for the company's future, he is more wise shepherd than unyielding sentinel. He educates those willing to learn, satisfies the curious, and then encourages them to challenge his perspective against the realities of the marketplace. The result rarely falls in the middle and, in fact, usually ends up closer to Peter's original blueprint.

Alex Teu, Business Development

Often the company scribe, Alex also brings his mouth to the table to create revenue generating ideas and partnerships for the company. For LeapFILE Folders, he will lean even more on the communication and persuasive skills developed during his former life as a big firm lawyer to develop and execute a strategy that capitalizes on the far reaches of its platform technology.

Jeh Lin, Client Services

Jeh is affectionately known as "Michael Clayton" because he takes care of customers and solves their problems when no others can. Having been the main LeapFILE customer contact since day one, Jeh can uncannily recall the details of any of the company's 2,000 clients at the drop of a hat.

Tony Yang, Marketing

Tony is charged with the Herculean task of demonstrating how LeapFILE Folders can change the business world by the way files are shared and distributed. With a strong grasp of technical skills and a deep understanding of traditional and new marketing, Tony is well-equipped to show LeapFILE's thought leadership as a technology innovator and to build relevance and engagement with the market.
